If you smell gas inside or outside of your home:

1. NO FLAMES OR SPARKS! Immediately put out all smoking materials and other open flames. Do not operate lights, appliances, telephones, or cell phones. Flames or sparks from these sources can trigger an explosion or a fire.

2. LEAVE THE AREA IMMEDIATELY! Get everyone out of the building or area where you suspect gas is leaking.

3. SHUT OFF THE GAS. Turn off the main gas supply valve on your propane tank, if it is safe to do so. To close the valve, turn it to the right (clockwise).

4. REPORT THE LEAK. From a neighbor’s home or other building away from the gas leak, call your propane retailer right away. If you can’t reach your propane retailer, call 911 or your local fire department.

5. DO NOT RETURN TO THE BUILDING OR AREA until your propane retailer determines that it is safe to do so.

6. GET YOUR SYSTEM CHECKED. Before you attempt to use any of your propane appliances, your propane retailer or a qualified service technician must check your entire system to ensure that it is leak-free.

For additional information about propane safety and emergency preparedness please visit usepropane.com.
The purpose of this brochure is to provide information you need to know about propane safety and how to prepare to keep your family safe during and after an earthquake. By taking a few simple propane-related safety precautions and discussing them with your family, you can reduce the potential for devastating property loss, personal injury, and even death.

**BEFORE**

Be prepared for earthquakes

- Know how and where to shut off the outdoor propane supply and indoor propane appliances. For more information, contact your propane retailer.
- MAKE SURE THAT YOU AND YOUR FAMILY KNOW WHAT PROPANE SMELLS LIKE. Propane has a strong, unpleasant smell like rotten eggs, a skunk’s spray, or a dead animal.
- Consider anchoring or bracing your tank to help prevent them from moving, sliding or falling over during an earthquake. Contact your propane retailer for more information.
- Clear the area of any tall or heavy objects that can fall on the tank during an earthquake.
- Consider installing a seismic gas shutoff valve. This type of valve will automatically cut off the flow of gas to your home during an earthquake. Some local areas may require the installation of a seismic gas shutoff valve. Contact your local authorities or propane retailer for more information.
- NEVER store or place a propane cylinder indoors or in an enclosed area such as a basement, garage, shed or tent.

**DURING**

What to do during an earthquake

During an earthquake, there are non-propane-related safety measures that you should observe. Whether you are inside or outside of your home you must quickly decide on the best course of action to take:

- If you are inside a building and you feel the earth shaking, immediately get down on the floor and take cover under a sturdy stationary object such as a heavy table, counter, or a desk. Protect your head and face, while holding onto the object until the trembling stops.
- If you are outside, make sure that you stay clear of buildings, trees, power lines, propane tanks or other large stationary objects. Drop down on the ground and protect your head and face.

**AFTER**

What to do after an earthquake

After the earthquake is over, you are not necessarily out of danger. Often, they are followed by aftershocks where additional trembling can be felt. These can occur shortly after the initial earthquake has occurred or even several days later. Listen to your local authorities, or television and radio stations, for instructions on the appropriate course of action to take.

Use caution in the area surrounding your home or farm. If you have any doubts about your safety, leave the area immediately and have your property inspected by a qualified building inspector or structural engineer before re-entering. Take the time to carefully evaluate the condition of all the structures on your property. If it is dark, use flashlights, not candles.

Look carefully around the entire area. Check for downed power lines. These can create major safety hazards. Earthquakes can move, shift or damage gas lines and tanks. Immediately call your local utility company or propane retailer if any of these hazards are observed.

After the disaster, don’t create another

Sometimes, as a result of an earthquake, a power outage, fire, or flood can occur. To help reduce the potential for injury or death, there are additional safety rules you should observe at all times.

- NEVER use outdoor propane appliances indoors or in enclosed areas. This can result in carbon monoxide (CO) poisoning and death. These include outdoor portable heaters, barbecue grills, and portable generators. Only use appliances indoors that are designed and approved for indoor use.
- NEVER store or place a propane cylinder indoors or in an enclosed area such as a basement, garage, shed or tent.
- NEVER use a gas oven or range-top burners to provide space heating.
- DO NOT UNDER ANY CIRCUMSTANCES TRY TO MODIFY OR REPAIR VALVES, REGULATORS, OR OTHER APPLIANCE PARTS.
- NEVER turn on a light switch, use any power source or inspect your household appliances while standing in water. This can result in electrocution.
- DO inspect chimneys, flue pipes and vent connectors for damage, blockage or debris.
- DO inspect your propane appliances for water or other damage, if it is safe to do so. If appliances have electric components and have been exposed to water, they can create a fire hazard.

If you suspect any of your propane appliances, equipment, or vehicles have been under water or they have been damaged, or you have turned off your gas supply, contact your propane retailer.

Schedule a time for a qualified service technician to perform a complete inspection of your propane system. The technician can also perform a leak test on the system, and re-light your pilot lights.
