If you smell gas inside or outside of your home:

1. **NO FLAMES OR SPARKS!** Immediately put out all smoking materials and other open flames. Do not operate lights, appliances, telephones, or cell phones. Flames or sparks from these sources can trigger an explosion or a fire.

2. **LEAVE THE AREA IMMEDIATELY!** Get everyone out of the building or area where you suspect gas is leaking.

3. **SHUT OFF THE GAS.** Turn off the main gas supply valve on your propane tank, if it is safe to do so. To close the valve, turn it to the right (clockwise).

4. **REPORT THE LEAK.** From a neighbor’s home or other building away from the gas leak, call your propane retailer right away. If you can’t reach your propane retailer, call 911 or your local fire department.

5. **DO NOT RETURN TO THE BUILDING OR AREA** until your propane retailer determines that it is safe to do so.

6. **GET YOUR SYSTEM CHECKED.** Before you attempt to use any of your propane appliances, your propane retailer or a qualified service technician must check your entire system to ensure that it is leak-free.

**IMPORTANT CONTACTS**

The purpose of this brochure is to provide information you need to know about propane safety and how to keep your family safe during periods of extreme heat. By taking a few simple propane-related safety precautions and discussing them with your family, you can reduce the potential for property loss, personal injury, and even death.

**Before**

- Make sure your propane tank (and any other cylinders) is painted with a light-reflecting color. This will help keep the temperature level of the propane down. For more information, contact your propane retailer.
- Know how and where to shut off the outdoor propane supply and indoor propane appliances. For more information, contact your propane retailer.
- **MAKE SURE THAT YOU AND YOUR FAMILY KNOW WHAT PROPANE SMELLS LIKE.** Propane has a strong, unpleasant smell like rotten eggs, a skunk’s spray, or a dead animal.
- **NEVER** store or place a propane cylinder indoors or in an enclosed area such as a basement, garage, shed, or tent.
- It is recommended that you consider installing a carbon monoxide (CO) detector listed by Underwriters Laboratories (UL) on every level of your home. Be sure to follow the manufacturer’s instructions regarding installation, location, and maintenance.
- Propane gas detectors provide an additional measure of security. It is recommended that you consider installing one or more propane gas detectors listed by UL. Be sure to follow the manufacturer’s instructions regarding installation, location, and maintenance.
- Have a list of instructions on how to turn off electricity, propane, and water. Review suggested preparations for conditions such as extreme heat with your propane retailer as well as other utility suppliers. Advise them of any special needs you may have.
- Create an emergency preparedness plan and review it regularly with your family in order to keep them safe during a potential disaster.

**During**

If extremely hot weather is predicted, listen to your local authorities, or television and radio stations, for instructions on the appropriate course of action to take. Since this type of weather can be accompanied by days—sometimes weeks—of drought-like conditions, there are also steps you can take to keep your propane system working properly:

- Make sure the area within 10 feet of your propane tank and your propane grill is clear of flammable materials. Remove any debris that is combustible or easily ignited, including leaves, brush, any vegetation, and rags.
- Cool down your outdoor propane tank by spraying it with a garden hose. By doing so, you can help lower the gas pressure and elevated temperature levels inside the tank. This reduces the possibility of the system releasing excess gas through the pressure-relief valve, its built-in safety feature.
- **DO NOT** under any circumstances try to modify or repair valves, regulators, or other appliance parts.
- **NEVER** turn on a light switch, use any power source, or inspect your household appliances while standing in water. This can result in electrocution.
- **DO** inspect your propane appliances for water or other damage, if it is safe to do so. If the appliances have electric components and have been exposed to water, they can create a fire hazard.
- Have a list of instructions on how to turn off the outdoor propane supply and indoor propane appliances. For more information, contact your propane retailer.
- **MAKE SURE THAT YOU AND YOUR FAMILY KNOW WHAT PROPANE SMELLS LIKE.** Propane has a strong, unpleasant smell like rotten eggs, a skunk’s spray, or a dead animal.
- **NEVER** store or place a propane cylinder indoors or in an enclosed area such as a basement, garage, shed, or tent.
- It is recommended that you consider installing a carbon monoxide (CO) detector listed by Underwriters Laboratories (UL) on every level of your home. Be sure to follow the manufacturer’s instructions regarding installation, location, and maintenance.
- Propane gas detectors provide an additional measure of security. It is recommended that you consider installing one or more propane gas detectors listed by UL. Be sure to follow the manufacturer’s instructions regarding installation, location, and maintenance.

- Create an emergency preparedness plan and review it regularly with your family in order to keep them safe during a potential disaster.

**After**

- If you suspect any of your propane appliances, equipment, or vehicles have been under water or they have been damaged, or you have turned off your gas supply:
  - **DO** schedule a time for a qualified service technician to perform a complete inspection of your propane system. The technician can also perform a leak test on the system and re-light your pilot lights.
  - **DO NOT** use or operate appliances, equipment, or vehicles, or turn on the gas supply, until your system has been inspected by a qualified service technician.

Follow these general safety rules:

- Extreme heat can contribute to power outages, wildfires, or other events requiring you to take additional safety measures. To help reduce the potential for injury or death, there are general safety rules you should observe at all times:
  - **NEVER** use outdoor propane appliances indoors or in enclosed areas. This could result in CO poisoning or death. These include outdoor portable heaters, barbecue grills, and portable generators. Only use appliances indoors that are designed and approved for indoor use.
  - **NEVER** store or place a propane cylinder indoors or in an enclosed area such as a basement, garage, shed, or tent.
